

Abstract

The present invention generally relates to surgical clips. A surgical clip comprises a first piece comprising a first base and a first projection extending from the first base, a second piece comprising a second base, a second projection extending from the second base wherein the second projection further comprises a top surface, at least one side surface and a bottom surface, the surfaces defining a reservoir therein, and the first and the second piece are detachably connectable. In a preferred embodiment, the reservoir is self-releasing to deliver therapeutic materials when the first piece and second piece are connected.
